STERILISATION TRAYS AND ACCESSORIES

Our range of high-quality stainless steel washing and instrument trays and baskets are produced in line with industry standard sizes and can be made to fit customer requirements subject to a minimum order quantity.

The sterilisation tray range holds smaller items that are difficult to keep track of during sterilisation as well as larger items with small parts. Our mesh trays and instrument trays are heavy duty stainless steel for tough, clean, and corrosion-resistant surfaces.

Nic-Nac Baskets are designed to transport small items through the wash and autoclave process. All Nic-Nac Baskets are produced with a perforated stainless-steel sheet with a scalloped hinged lid.

CBM basket ranges are manufactured with AIS1304 grade stainless steel and can be used within sterilisation containers or with sterilisation wrap. Due to electro polishing, they are resistant to colour changes and have a surface treatment that increases their water drainage capacity.

Plastic Sterilisation Trays are designed to cover most requirements for protecting instruments during sterilisation and transportation. Grid holes in the tray provide drainage, fixing positions for various inserts, and buttons to raise silicone pin mats from the base. Transparent lids are strongly fitted to provide additional security and ensure all contents are highly visible. Suitable for low temperature sterilisation processes.

We also have our range of accessories such as Corner Protectors, Protective Mats, Soaker Sheets and Labels that are effective solution to reduce damage of trays but also instruments.
